## Squares

A side multiplied by 1.412 = the diameter of a circle which will circumscribe circle.

A side multiplied by $4.443=$ the circumference of its circumscribing the given square.

A side multiplied by $1.1284=$ the diameter of a circle equal in area to that given square.

A side multiplied by $3.545=$ circumference of an equal circle.
To find diagonal of a square - multiply side by 1.4142 .

## Measurements From Other Geometrical Forms

To find the area of a ellipse - multiply the product of its axes by 0.7854 ; or, multiply the product of its semi-axes by 3.14159 .

Contents of a cylinder $=$ area of end $X$ length
Contents of a wedge $=$ area of triangular base X altitude.
Surface of a cylinder $=$ length $X$ circumference plus area of both ends.

Surface of a sphere $=$ diameter squared $\times 3.1416$; or diameter $X$ circumference.

Contents of a sphere $=$ diameter cubed $X 0.5236$
Contents of a pyramid or cone, right or oblique, regular or irregular = area of base X one-third of the altitude.

Area of a triangle $=$ base $X$ one-half the altitude.
Area of parallelogram = base $X$ altitude.
Area of a trapezoid = altitude $X$ one-half the sum of parallel sides.
To find distance across the corners of hexagons - multiply the distance across the flats by 1.1547 .
